

Test 1

Adjust the CSS in this document. Make all columns headers and their data centered unless their text content length (across all rows) is higher than 20.

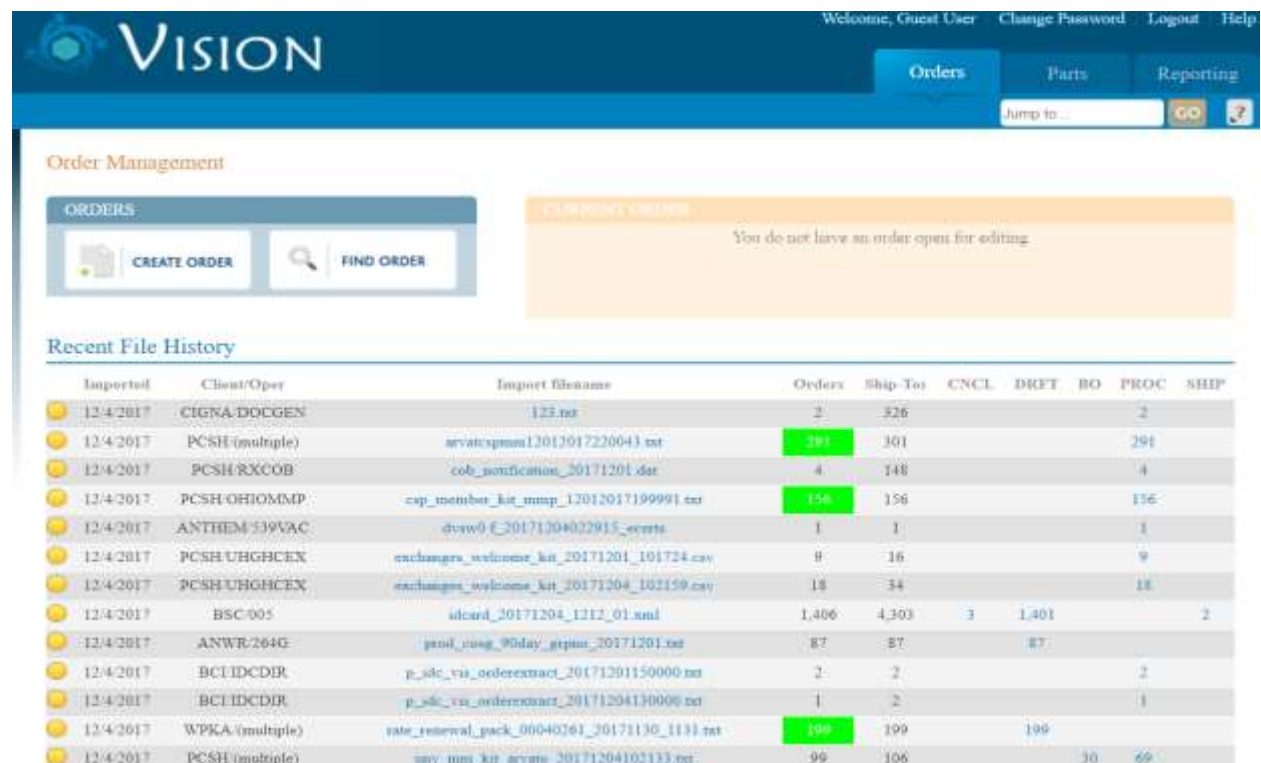

Initial Version of Screenshot:

The screenshot shows the VISION Order Management interface. At the top, there's a navigation bar with 'Welcome, Guest User', 'Change Password', 'Logout', and 'Help'. Below this are tabs for 'Orders', 'Parts', and 'Reporting'. A 'Jump to...' search bar is also present. The main content area is titled 'Order Management' and contains a section for 'ORDERS' with 'CREATE ORDER' and 'FIND ORDER' buttons. A message box states 'You do not have an order open for editing'. Below this is a 'Recent File History' table.

Imported	Client/Oper	Import filename	Orders	Ship-To	CNCL	DRFT	BO	PROC	SHIP

12/4/2017	HUMANA-001	render_2_da_extract_gilanyar2018_20171201_134719.csv	46	46				46	

Code update Output:

The screenshot shows the VISION Order Management interface after CSS updates. The layout is similar to the initial version, but the text in the table is now centered. The 'ORDERS' section and message box remain the same. The 'Recent File History' table is updated with centered text.

Jump Help Dialog

You are able to search the following types:

- MarLo order number (X12345678)
- Customer data feed's order number
- Customer data file name
- Member number/HCID
- Group ID
- Group name
- Broker/Agent ID
- Part number

Production identifiers:

- POD ID (X12345678A+3--12)
- Batch order number (X12345678A)
- Ship-To order number (X12345678A-12)
- Workorder number (X12345678A+3)

Scans the following only if you enter at least 10 characters, and finds matches that start with the text you enter so "brandywine ind" would find "Brandywine Industries"

- Ship-to name (not Attention)
- Ship-to street address (1st street line only)
- Part description (any part of description)

Miscellaneous identifiers:

- Report ID's (JA02) or report number (r35)
- Role table name (SR_DAILY_CONTRACTS)
- Audit pool number (pool 123)
- Query number (q21)

Searches are not case sensitive so "abc" and "ABC" will return the same results.
